

Derogations from Drawing up a Declaration of Performance

Article 5 (a) of Regulation (EU) 305/2011 (Construction Products Regulation)

Date of Issue: 30th of September 2024.

Relevant Harmonised Legislation: [Regulation \(EU\) No 305/2011 of the European Parliament and of the Council of 9 March 2011 laying down harmonised conditions for the marketing of construction products.](#)

Applicable Article: [Article 5 \(a\)](#).

Article 5(a) of [Regulation \(EU\) No 305/2011](#) (Construction Products Regulation) - allows a derogation for the manufacturer when certain criteria are met.

Article 5 of the Construction Products Regulation (CPR) sets out a number of exceptions (or 'derogations') to the requirement that a Declaration of Performance ([DoP](#)) is made for each construction product that conforms to a [harmonised European standard \(hEN\)](#) or [European Technical Assessment \(ETA\)](#). These derogations cover construction products which are (a) 'individually manufactured or custom-made in a non-series process...'; (b) 'manufactured on the construction site for incorporation in the respective construction works...'; or (c) 'manufactured in a traditional manner or in a manner appropriate to heritage conservation...'. According to Article 8(2), if a [DoP](#) has not been drawn up by the manufacturer, then the [CE Marking](#) shall not be affixed.

"Individually manufactured" are products manufactured according to customer designs or designed by the manufacturer taking into account the requirements and needs of the client.

"Custom made" means "made to fit the needs or requirements of a particular person" or "made according to the specifications of an individual purchaser".

"Series production" is "the manufacture of goods in large quantities using standardized designs and assembly-line techniques".

One can therefore assume that in a **"non-series process"** should be understood as the manufacture of goods in small quantities without using standardised designs and assembly line techniques.

Criteria for decision if the case of "the construction product is individually manufactured or custom-made in a non-series process" according to Art. 5(a) is given:

The criteria for this decision can be:

- Number of manufactured products: Only where the number of manufactured products is 1, we can speak beyond doubt of individual production. However, which number of manufactured products in which time frame can be considered to satisfy the criterion of individual production, depends in each case on the specific type of the product concerned.
- Differences: Where products are produced, which are similar in various aspects, or in some important characteristics, we can normally assume a series production. The difference in just one characteristic (e.g. dimensions) is usually not sufficient to assume non-series production.
- Method of production: The method of production is a third criterion. Whenever the construction product concerned is manufactured or assembled by means of industrial production methods, we can assume a series production. The size of the manufacturing plant (staff number, turnover) cannot be of any influence in this connection.

It is worth reminding the reader on the provisions of [Guidance Paper M Conformity Assessment Eurocodes](#) developed in the framework of the CPD which are pointing to the same understanding.

In clause 4.9.3 of the Guidance Paper, it is mentioned that under the term “*individual (and non-series) production*” one would understand: “... *products of individual design that are ordered for and installed in one and the same known work. They should neither be part of a range of equal products, which is manufactured in series of the same kind combining usual components in the same way, nor should they and their field of application (e.g. dimensions, weight) be offered on the general initiative of the manufacturer (e.g. by means of published catalogues or other ways of advertising).* Under these conditions, individual and non-series production comprises products that are: – *individually designed and manufactured, upon request and for specific purposes, needing to readjust the production machines for their manufacture in order to be used in the work concerned; or – custom-made for a specific order to obtain one or several end use performances different from products manufactured in series, even if produced according to the same manufacturing process/system design.*”
